### Newsletter Tip

To learn more about the products featured in our Newsletters just **click** on the picture of the items and it will direct you to an informational sheet on each product.

The StarMOBILE™ diagnostic system is one of the most recent Chrysler Group diagnostic tools. It extends the functionality of the StarSCAN diagnostic tool by providing the following additional capabilities:

**Customer Data Recorder.** The StarMOBILE system supplements the Co-Pilot as a customer flight recorder for Controller Area Network vehicles. It has expanded event storage capability and is able to simultaneously record data elements across multiple ECUs, including body modules. During data recording, the StarMOBILE system will record readings selected by the technician when the tool is triggered in the vehicle by the customer.

#### **Pass-Through Diagnostics**

In this operation the StarMOBILE system operates in conjunction with a PC to allow scan tool functionality including: data displays, actuators, diagnostic routines, and vehicle flash functions. Unlike the Co-Pilot, which was designed strictly for use in the customer's vehicle, the StarMOBILE system

can be put to work throughout the Service Department.

The StarMOBILE system is initially intended for use with new Controller Area Network (CAN) equipped vehicles, for example, the 2006 PT Cruiser. A cross-reference list of applicable diagnostic tools to vehicles is maintained on the [www.aetools.us](http://www.aetools.us) website under downloads. Please refer to this document, the [Vehicle to Diagnostic Tool Reference Chart](#) when you have questions about which diagnostic tools may be used to service a Chrysler Group vehicle.

The StarMOBILE system has full dealer level capabilities including flash updates, key programming, and much more! The StarMOBILE is a superior diagnostic scan tool that is a must have for any repair shop that works on Chrysler products.

## UPDATING THE NEXTECH CARMAN SCAN LITE

**First Step Deleting The OLD Software.** This will save you the headache of trying to figure which is old software and new.

1. Go to this location: C:\Program Files\Nextech\Carmanscan Lite\data
2. Delete ALL the files in the folder called "data". If you haven't ever updated before the folder may be blank, this is okay too.
3. Once you clean out that folder you can close down everything and proceed with getting the update.

### Getting the Update

1. Go to [www.ae-diagnosticsolutions.com](http://www.ae-diagnosticsolutions.com) > Nextech > Updates
2. Click on the file you wish to download i.e. 970 Software Asian and Euro.
3. Either Save to your desktop or click Run
4. Once the download is complete you may need to click Run
5. Once you are displayed with the Disclaimer screen make sure the "Extract to" location is  
C:\Program Files\Nextech\Carmanscan Lite\data
6. Click Start and the program will automatically unzip the files to that location. Once the program is done extracting the Patch/Setup will automatically run. Just follow the on screen instructions.
7. After the Files have been extracted and the Patch has been installed repeat steps 1 - 5 for the TPMS files. **(Patch file may not be included with all updates, and TPMS is optional.)**

### Applying the Update

1. At this point you have the latest software, patch and TPMS files now we need to apply them to the interface. Make sure the Lite is powered on and is in Software Download Mode.
2. Open the Carman Scan Lite software on the desktop.
3. The program and interface should synch up. The left side is the files saved on your PC and the right side is the files installed on the interface. Select ALL the files EXCEPT the Main Program on the RIGHT side (interface) and click DELETE.
4. Once you have deleted all the files off the interface select ALL the files on the LEFT (PC) side and click download.
5. After all the files have been transferred to your unit, the Lite is up to date and ready to go. Check to see if you need a registration code by select each software on the interface i.e. Japan, USA and Euro....Ect.
